In the Claims:

Cancel Claims 1 - 20

21. (new) A dental device comprising: a scaler attached to a pick-up through a connection, said pick-up is connected to an amplifier which is connected to audio production device where said pick-up has a condenser microphone with a receptacle to pick up vibrations from said scaler.

22. (new) A device as in claim 21 in which said audio production device is headphones.

23. (new) A device as in claim 21 in which said amplifier has a volume control.

24. (new) A device as in claim 21 in which said audio production device has a volume control.

25. (new) A device as in claim 21 in which said audio production device connects to said amplifier through a plug being inserted into a plug jack.

26. (new) A device as in claim 21 in which said amplifier has a clip attached to one side.

27. (new) A device as in claim 21 in which said amplifier has a power source connected to it.

28. (new) A device as in claim 27 in which said power source is a battery.

29. (new) A device as in claim 21 in which said connection between said audio production device and said amplifier is wireless.

30. (new) A device as in claim 1 in which said connection between said pickup and said amplifier is wireless.

App. No. 10/707,967

31. (new) A method for root planning comprising using a device having a scaler attached to a pick-up through a connector, having said pick-up is connected to an amplifier which is connected to audio production device where said pick-up has a condenser microphone with a receptacle to pick up vibrations from said scaler, using said scaler on teeth and having listening to said audio production device.

32. (new) A method as in claim 31 further comprising having said audio production means is headphones.

33. (new) A method as in claim 31 further comprising having said amplifier means has a volume control

34. (new) A method as in claim 31 further comprising having said audio production means has a volume control.

35. (new) A method as in claim 31 further comprising having said audio production device connects to said amplifier through a plug being inserted into a plug jack.

36. (new) A method as in claim 31 further comprising having said amplifier has a clip attached to one side.

37. (new) A method as in claim 31 further comprising having said amplifier has a power source connected to it.

38. (new) A dental device comprising scaler attached to a pick-up through a connection, said pick-up is connected to an amplifier which is connected to audio production device, where said amplifier has a volume control where said pick-up has a condenser microphone with a receptacle to pick up vibrations from said scaler and where said amplifier has a power source connected to it.
